

WHERE can I get vaccinated against corona?

Residents of retirement and nursing homes are vaccinated directly on-site.

All others are vaccinated at the vaccination centres or at the family doctor. The vaccination centre for the district of Sigmarigen is in Hohentengen.

Österfeldstraße, 88367 Hohentengen

Further Information: www.landkreis-sigmaringen.de/de/Landratsamt/Kreisverwaltung/Fachbereiche/Gesundheit/Impfzentren

– There will be no invitation for vaccination from your GP or your health insurance. You will have to make the appointment yourself.

– Registering for corona vaccination appears to be difficult. If you have a problem, perhaps relatives or friends can help

Please note: You need 2 corona vaccinations.

Unfortunately, the federal government and the state cannot currently provide vaccine doses as would be required and desirable. There are always only as many vaccination dates as there is vaccine. Therefore, it can take a while until everyone receives a vaccination appointment.

BOOK appointments over the phone.

Call **116117** to book appointments for 2 corona vaccinations.

For this, you will need:

- A pen and paper
- Unfortunately patience and
- Possibly several call attempts

Please book both appointments right away!

BOOK appointments via the internet.

- Internet access
- The website
- www.impfterminservice.de/impftermine
- A mobile phone and an e-mail address
- Knowledge of how to use the Internet or
- Someone who know how to use the Internet and can help you
- Again, patience

Please book both appointments right away!

Things you should know about corona vaccination

Vaccination against Corona helps to protect you and to contain the pandemic.

WHY should I get vaccinated against corona?

You will protect yourself, your loved ones and your contact persons. Getting vaccinated is voluntary and free of charge. The vaccines have been checked thoroughly with regards to tolerability, safety and efficacy.

WHO can get the corona vaccine?

At present there is not enough vaccine available for everyone, therefore people with the highest risk of becoming seriously ill with COVID-19 will be vaccinated first.

– Once enough vaccine is available, vaccination will be offered to everyone.

WHAT is the vaccination procedure?

On the agreed vaccination date, a doctor will talk to you and provide you with more detailed information about the vaccination against corona. Your questions will also be answered. Then you will be given the vaccine. Afterwards, you will be monitored for potential reactions for a short period.

– Depending on the manufacturer, you will get your second vaccination after 6 to 12 weeks.

– So you will be given two dates when you make your appointment.

WHAT to bring along?

On vaccination day bring along your identity card and the electronic healthcare card and, if available, also your vaccination certificate.

The vaccination is free of charge.

HOW do the vaccines work?

At present, three corona vaccines are available. In clinical trials they have been very effective, which means that it is very unlikely that a vaccinated person will fall ill.

– No animal products have been used in the production of the vaccine. The vaccine is compatible with the rules of all major religions.

– At this time, it is not possible to forecast how long a vaccinated person is protected against COVID-19.

– Full protection will begin 7 days following the end of vaccination. It is effective in 95 of 100 people

Schutz vor Corona Protection against Corona

AHA+A+L

Since it is not certain whether vaccinated persons can transmit the virus to other people, they do have to follow the AHA+A+L rules after vaccination.

WHAT side effects can occur?

Reactions are possible since the body has first to deal with this vaccine. Sometimes pain at the injection site, fatigue, headaches, pain in the muscles or joints can be observed.

– Reactions are less common in older people than in younger people. They are usually rather mild.
